1 2013-01-18

Heart Beat Packets (HBP) between DB servers

- The Main DB receives the HBP from its SLAVE_DB.
- The SLAVE DB sends the HBP to the Main_DB.

Monitor process: I add a display function to print the available slot number on the screen.

Why Su rui adds the function Zero_Lifetime_Record_Process() ? He will execute the function if some process is killed by the monitor process.

The encoding of all program and database configuration should be SET as UTF-8.

2 2013-01-19

For pgDB users, there are two users. The first user named 'pg_recorder' just has the 'INSERT' right. The second user named 'pg_viewer' just has the 'SELECT' right.
